

SecPath地址扫描和端口扫描攻击防范典型配置

一、组网需求

部署SecPath防火墙，对地址扫描(ip-sweep)和端口扫描(port-scan)攻击进行防范，并利用黑名单功能将攻击者进行隔离。

二、组网图

三、配置步骤

```
[SecPath10F]dis cur
#
sysname SecPath10F
#
firewall packet-filter enable           //开启全局报文统计功能
firewall packet-filter default permit
#
undo connection-limit enable
connection-limit default deny
connection-limit default amount upper-limit 50 lower-limit 20
#
firewall statistic system enable
#
firewall blacklist enable              //启用黑名单功能
#
radius scheme system
#
domain system
#
local-user admin
password cipher .J@USE=B,53Q=^Q`MAF4<1!!
service-type telnet terminal
level 3
service-type ftp
#
interface Ethernet1/0
ip address 10.0.0.254 255.255.0.0
#
interface Ethernet2/0
speed 10
duplex half
ip address 9.0.0.254 255.0.0.0
#
interface NULL0
#
firewall zone local
set priority 100
#
firewall zone trust
add interface Ethernet1/0
set priority 85
#
firewall zone untrust
add interface Ethernet2/0
```

```

set priority 5
statistic enable ip outzone           //对非信任域出方向的报文进行统计
#
firewall zone DMZ
set priority 50
#
firewall interzone local trust
#
firewall interzone local untrust
#
firewall interzone local DMZ
#
firewall interzone trust untrust
#
firewall interzone trust DMZ
#
firewall interzone DMZ untrust
#
FTP server enable
#
//设置地址扫描的阈值为每秒50次，将攻击者加入到黑名单并阻断10分钟

firewall defend ip-sweep max-rate 50 blacklist-timeout 10
//设置端口扫描的阈值为每秒100次，将攻击者加入到黑名单并阻断10分钟
firewall defend port-scan max-rate 100 blacklist-timeout 10
#
user-interface con 0
user-interface vty 0 4
authentication-mode scheme
#
return

```

四、配置关键点

1. 对域进入或送出的报文进行统计;
2. 开启黑名单功能;
3. 设置地址/端口扫描的阈值和攻击者被阻断的时间。

五、验证结果

1, 在攻击机上ping 10.0.0.1, 可以ping通。然后在攻击机9.0.0.1上使用nmap对10.0.0.1进行地址扫描: nmap -v --min-hostgroup 100 -sS 10.0.0.0/16

//防火墙弹出地址扫描告警

```

[SecPath10F]
%Jan 1 00:15:54:165 2000 SecPath10F
SEC/5/BLS:blsOptMode(1026)=add;srcIPAddr(1017)=9.0.0.1;blsOptReason(1027)= IP Sweep ;blsHoldTime(1028)=10
%Jan 1 00:16:08:915 2000 SecPath10F SEC/5/ATCKDF:atckType(1016)=(16)IP-sweep;rc
vIfName(1023)=Ethernet2/0;srcIPAddr(1017)=9.0.0.1;srcMacAddr(1021)=;destIPAddr(1019)=10.0.0.51;destMacAddr(1022)=;atckSpeed(1047)=50;atckTime_cn(1048)=20000101001554

```

//攻击者地址已经加入到黑名单中, 并且阻断时间为10分钟

```

[SecPath10F]dis firewall blacklist item
Firewall blacklist item :
Current manual insert items : 0
Current automatic insert items : 1
Need aging items : 1

```

IP Address	Insert reason	Insert time	Age time(minutes)
9.0.0.1	IP Sweep	2000/01/01 00:15:53	10

此时在攻击机上ping 10.0.0.1, 发现无法ping通。

```
2, 10分钟阻断时间过后, 在攻击机9.0.0.1上ping 10.0.0.1, 可以ping通。然后, 使用nmap对10.0.0.1进行端口扫描: nmap -v -p 1-65535 10.0.0.1
//防火墙弹出端口扫描告警
[SecPath10F]
%Jan 1 00:03:55:514 2000 SecPath10F
SEC/5/BLS:blsOptMode(1026)=add;srcIPAddr(1017)=9.0.0.1;blsOptReason(1027)= Port Scan ;blsHoldTime(1028)=10
%Jan 1 00:04:08:915 2000 SecPath10F SEC/5/ATCKDF:atckType(1016)=(25)TCP
port-sc
an;rcvIfName(1023)=Ethernet2/0;srcIPAddr(1017)=9.0.0.1;srcMacAddr(1021)=;destIP
A
ddr(1019)=10.0.0.1;destMacAddr(1022)=;atckSpeed(1047)=100;atckTime_cn(1048)=2
000
0101000355
//攻击者地址已经加入到黑名单中, 并且阻断时间为10分钟
[SecPath10F]dis firewall blacklist item
Firewall blacklist item :
Current manual insert items : 0
Current automatic insert items : 1
Need aging items : 1

IP Address   Insert reason   Insert time      Age time(minutes)
-----
9.0.0.1     Port Scan      2000/01/01 00:03:54   10
此时在攻击机上ping 10.0.0.1, 发现无法ping通。
```
