Secpath1800F远程接入验证方式典型配置

一、组网需求：

管理员通过远程telnet、SSH连接防火墙及通过console口管理防火墙验证方式的配置

。

二、组网图：

三、配置步骤：

适用版本：Secpath1800F 所有VRP 版本

```
sysname Secpath1800F
#
firewall packet-filter default permit interzone local trust direction inbound
firewall packet-filter default permit interzone local trust direction outbound
firewall packet-filter default permit interzone local untrust direction inbound
firewall packet-filter default permit interzone local untrust direction outbound
firewall packet-filter default permit interzone local dmz direction inbound
firewall packet-filter default permit interzone local dmz direction outbound
firewall packet-filter default permit interzone trust untrust direction inbound
firewall packet-filter default permit interzone trust untrust direction outbound
firewall packet-filter default permit interzone trust dmz direction inbound
firewall packet-filter default permit interzone trust dmz direction outbound
firewall packet-filter default permit interzone dmz untrust direction inbound
firewall packet-filter default permit interzone dmz untrust direction outbound

```

四、 配置关键点：

在使用SSH连接时注意除配置上述命令项之外还要使用命令生成RSA密钥对，配置

方式如下：

在系统模式下输入命令： **rsa local-key-pair create**
