

SecPath1800F 混杂模式的最简配置

一、组网需求：

混杂模式通常使用在两种情况：

- 1、在透明模式下需要启用hrp的情况；
- 2、在透明情况下做远程管理。

二、组网图：

三、配置步骤：

适用版本：SecPath1800F 当前所有 VRP 版本

```
#  
sysname SecPath1800F  
# // 配置域间规则  
firewall packet-filter default permit interzone local trust direction inbound  
firewall packet-filter default permit interzone local trust direction outbound  
firewall packet-filter default permit interzone local untrust direction inbound  
firewall packet-filter default permit interzone local untrust direction outbound  
firewall packet-filter default permit interzone local dmz direction inbound  
firewall packet-filter default permit interzone local dmz direction outbound  
firewall packet-filter default permit interzone trust untrust direction inbound  
firewall packet-filter default permit interzone trust untrust direction outbound  
firewall packet-filter default permit interzone trust dmz direction inbound  
firewall packet-filter default permit interzone trust dmz direction outbound  
firewall packet-filter default permit interzone dmz untrust direction inbound  
firewall packet-filter default permit interzone dmz untrust direction outbound  
#  
bypass switch-back auto  
#  
firewall mode composite // 配置防火墙模式  
#  
firewall statistic system enable  
#  
interface Aux0  
async mode flow  
link-protocol ppp  
#  
interface Ethernet0/0/0  
#  
interface Ethernet0/0/1  
#  
interface Ethernet1/0/0  
portswitch  
#  
interface Ethernet1/0/1  
portswitch
```

```

#
interface Ethernet1/0/2
portswitch
#
interface Ethernet1/0/3
portswitch
#
interface Ethernet1/0/4
portswitch
#
interface Ethernet1/0/5      // 取消端口 portswitch 功能后配置地址作为三层口使用
ip address 192.168.1.254 255.255.255.0
#
interface Ethernet1/0/6
portswitch
#
interface Ethernet1/0/7
portswitch
#
interface NULL0
#
firewall zone local
set priority 100
#
firewall zone trust          // 端口加入相应域
set priority 85
add interface Ethernet1/0/1
#
firewall zone untrust        // 端口加入相应域
set priority 5
add interface Ethernet1/0/3
#
firewall zone dmz
set priority 50
#
firewall interzone local trust
#
firewall interzone local untrust
#
firewall interzone local dmz
#
firewall interzone trust untrust
#
firewall interzone trust dmz
#
firewall interzone dmz untrust
#
aaa
authentication-scheme default
#
authorization-scheme default
return

```

四、 配置关键点：

在混杂模式的情况下，所有的端口默认情况为二层端口，如果需要配置该端口为三层端口，

首先要取消端口的二层转发功能。另外：对于实际的应用环境通常打开防火墙的mac转发功

能，使用命令：**firewall unknow-mac broadcast flood**（设备上默认是打开的）
