

知 设备被扫描出 CVE-2012-3268 漏洞如何处理？

漏洞 金山 2016-09-14 发表

漏洞描述如下：

The remote host allows SNMP read-only access to either h3c-user.mib or hh3c-user.mib. These MIBs contain information such as usernames, passwords, and user privileges. A remote attacker with a valid read-only community string could exploit this to enumerate usernames and passwords, which could lead to administrative access to the device.

解决方法：《H3C 技术公告【2012】031号-关于对设备SNMP访问漏洞规避办法》
