

## 知 Can MSTP of the S9500 Series Interoperate with other Devices

刘志伟 2007-01-25 发表

All products of H3C adopts MSTP standard algorithm of Comware platform, so that all H3C switches can successfully interconnect with MSTP.

The S9500 series can operate with CISCO MSTP and PVST+, but not with pvst. But CISCO adopts different MSTP standard from Huawei-3com. For this reason, even though the region configuration information is the same, two devices cannot be in the same region as the S9500 series devices and the CISCO devices all think of themselves as the region root of MSTP. That is, RSTP is actually running between such two devices.

S9500 supports auto-adjustment according to the STP packet, but they need be configured in port mode.

**stp compliance auto**
