

知 When the MAC Address Learning Number Is Set to 0, the Services Still Run Normally

刘志伟 2007-01-25 发表

When MAC address learning number is set to 0, no port MAC address is learnt, but packets are still forwarded in broadcast mode within the VLAN. If you don't want to forward the packets, configure the following command in port mode:

```
undo mac-address max-mac-count enable forward
```
