

## 知 What is the Function of the MAC Address of S9500 VLAN Interface

孟维佳 2007-02-27 发表

Depending on whether the destination MAC address is the VLAN virtual interface MAC address, S9500 decides whether to forward the packet at layer 2 or layer 3. If the destination MAC address is the VLAN virtual interface MAC address, it forwards the packet at layer 3, otherwise, it forwards the packet at layer 2.
