

Does S9500 Support jumbo Frame

孟维佳 2007-02-27 发表

S9500 supports jumbo frame. If the linecard has 100-M ports, the maximum size of a frame allowed is 1552 and if the linecard has no 100-M port, the maximum size of a frame is 10240.

Configuring a jumbo frame:

Global view

```
jumboframe enable [ jumboframe-value ] slot slot-num
```

```
jumboframe disable slot slot-num
```

Jumbo frames support discrete values and range configuration of 1536 to 10240, but the actual effective jumbo frame value falls into several minor sections: in 1536 to 1552, the actual value is 1552; in 1553 to 9022, the actual value is 9022; in 9023 to 9122, the actual value is 9122; and in 9123 to 10240, the actual value is 10240.
