Does S9500 Support Viewing the Stream at VLAN Layer-3 Interface

孟维佳　2007-02-27 发表

S9500 does not support viewing the stream at the VLAN layer-3 interface. However, you can use the **set egress** { **counter0** | **counter1** } command to set the stream statistics of a specific LPU slot. This command configures the stream statistics of a specific port, VLAN, TC or DP. After configuration, you can use the **display egress** { **counter0** | **counter1** } to view the related statistics. For detailed operation and query, refer to S9500 Operation Manual.
