## Configuration of MSDP on H3C S3600 series switch

### 1 Network requirements:

1.1 PIM-SM network adopts single BSR management domain, has several multicast source S and many receivers. Set anycast RP in PIM-SM domain, when new member joins into the multicast group, the switch that directly connected to receiver will send join message to the nearest RP in topology.

1.2 You should run OSPF to supply unicast routing in PIM-SM network and establish MSDP peer between SwitchC and SwitchD. The loopback10 and loopback0 of SwitchC and SwitchD are C-BSR or C-RP.
