

## Software Version Planning of the S9500 Series

孟维佳 2007-06-30 发表

Currently two V versions have been planned: S9500 V100 and S9500 V200;

As S9500 V200 has a major feature of supporting IPv6 and has not been publicized, we mainly focus on S9500 V100.

S9500 V100 has three R versions: S9500 V100R001, S9500 V100R002 and S9500 V100R006;

S9500 V100R001 has two B versions: B01 and B02, both of which are out of service;

S9500 V100R002 has three B versions: B00, B01 and B02. B00 and B01 are out of service while B02 has finished developing and started maintenance, which is carried out by a maintenance team for detecting faults and providing technological support.

S9500 V100R006 has one B versions: B01. At present, the B01 version is only available in the pilot deployment but will go to market very soon.

The other versions are still under developing. (As of 2007-03-05)
