Typical Configuration Of PPP MP on AR28、AR46 Series Routers--Directly Binding the Link to VT

[Requirements]

RouterA and RouterB interwork through the MP link, realizing higher bandwidth and reliability.

[Networking diagram]

[Configuration script]

Configuration script (RouterA)
sysname RouterA # radius scheme system # domain system # interface Virtual-Template0 /Create a VT interface/ ip address 10.1.1.1 255.255.255.0 # interface Serial1/0 link-protocol ppp ppp mp Virtual-Template 0 /Bind the physical port with VT0/ # interface Serial1/1 link-protocol ppp ppp mp Virtual-Template 0 /Bind the physical port with VT0/ # interface NULL0 # user-interface con 0 user-interface vty 0 4 # return
Configuration script (RouterB)
sysname RouterB # radius scheme system # domain system # interface Virtual-Template0 /Create a VT interface/ ip address 10.1.1.2 255.255.255.0 # interface Serial1/0 link-protocol ppp ppp mp Virtual-Template 0 /Bind the physical port with VT0/ # interface Serial1/1 link-protocol ppp ppp mp Virtual-Template 0 /Bind the physical port with VT0/ # interface NULL0 # user-interface con 0 user-interface vty 0 4 # return

[Verification]

Execute the **disp ppp mp** command, and see that the two physical links have been bound to VT0. The two routers can successfully ping the peer IP address.

```
[RouterA]disp ppp mp
Template is Virtual-Template0
max-bind: 16, min-fragment: 128
Bundle ef63fe328e5d, 2 members, slot 0, Master link is Virtual-Template0:0
Peer's endPoint descriptor: ef63fe328e5d
Bundle Up Time: 2006/01/27 07:50:38:696
0 lost fragments, 5 reordered, 0 unassigned, 0 interleaved
sequence 4/5 rcvd/sent
The member channels bundled are:
Serial1/0    Up-Time:2006/01/27 07:50:38:696
Serial1/1    Up-Time:2006/01/27 07:51:47:
```
