

知 Typical Configuration of Multicast

杨超 2007-09-17 发表

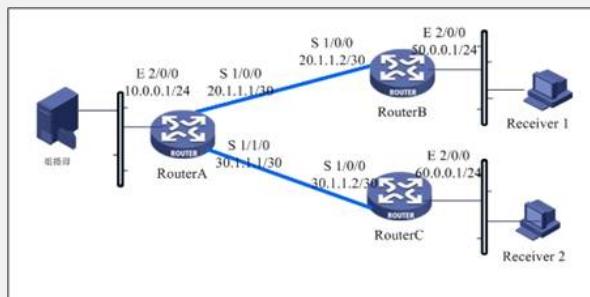

Typical Configuration of Multicast

1.1 PIM-DM Mode

[Requirements]

Multicast Source is the multicast source. Receiver 1 and Receiver 2 are two receivers of the multicast group.

[Networking diagram]

[Configuration script]

Configuration script on Router A

```
#  
sysname RouterA  
#  
router id 1.1.1.1  
#  
multicast routing-enable      /Enable the multicast routing/  
#  
radius scheme system  
#  
domain system  
#  
interface Ethernet2/0/0  
ip address 10.1.1.1 255.255.255.0  
pim dm                      /Set the PIM-DM mode/  
#  
interface Serial1/0/0  
link-protocol ppp  
ip address 20.1.1.1 255.255.255.252  
pim dm                      /Set the PIM-DM mode/  
#  
interface Serial1/1/0  
link-protocol ppp  
ip address 30.1.1.1 255.255.255.252  
pim dm                      /Set the PIM-DM mode/  
#  
interface NULL0  
#  
interface LoopBack0  
ip address 1.1.1.1 255.255.255.255  
#  
ospf 1  
area 0.0.0.0  
network 1.1.1.1 0.0.0.0  
network 10.1.1.0 0.0.0.255  
network 20.1.1.0 0.0.0.3  
network 30.1.1.0 0.0.0.3  
#  
user-interface con 0  
user-interface vty 0 4  
#  
return
```

Configuration script on Router B

```

#
sysname RouterB
#
router id 1.1.1.2
#
multicast routing-enable      /Enable the multicast routing/
#
radius scheme system
#
domain system
#
interface Ethernet2/0/0
ip address 50.1.1.1 255.255.255.0
pim dm          /Set the PIM-DM mode/
#
interface Serial1/0/0
link-protocol ppp
ip address 20.1.1.2 255.255.255.252
pim dm          /Set the PIM-DM mode/
#
interface NULL0
#
interface LoopBack0
ip address 1.1.1.2 255.255.255.255
#
ospf 1
area 0.0.0.0
network 1.1.1.2 0.0.0.0
network 20.1.1.0 0.0.0.3
network 50.1.1.0 0.0.0.255
#
user-interface con 0
user-interface vty 0 4
#
return

```

Configuration script on Router C

```

#
sysname RouterC
#
router id 1.1.1.3
#
multicast routing-enable      /Enable the multicast routing/
#
radius scheme system
#
domain system
#
interface Ethernet2/0/0
ip address 60.1.1.1 255.255.255.0
pim dm          /Set the PIM-DM mode/
#
interface Serial1/0/0
link-protocol ppp
ip address 30.1.1.2 255.255.255.252
pim dm          /Set the PIM-DM mode/
#
interface NULL0
#
interface LoopBack0
ip address 1.1.1.3 255.255.255.255
#
ospf 1
area 0.0.0.0
network 1.1.1.3 0.0.0.0
network 30.1.1.0 0.0.0.3
network 60.1.1.0 0.0.0.255
#
user-interface con 0
user-interface vty 0 4
#
return

```

[Verification]

Multicast routing table of Router A:

[RouterA]disp multicast routing-table

Multicast Routing Table

Total 1 entry

(10.1.1.2, 226.1.1.1)

Uptime: 00:00:18, Timeout in 289 sec

Upstream interface: Ethernet2/0/0(10.1.1.1)

Downstream interface list: NULL

Matched 1 entry

[Tip]

1. PIM is independent of specific unicast routing protocols. Therefore, we suppose that all routers are mutually reachable without concerning about the unicast routing protocol.

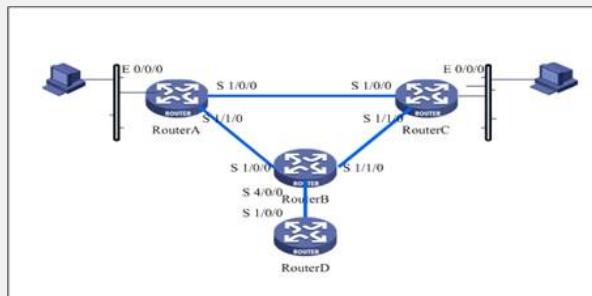

2. It is recommended to configure C-BSR and C-RP on the loopback interface of the same router.

1.2 PIM-SM Mode

[Requirements]

Multicast Source is the multicast source. Receiver 1 and Receiver 2 are two receivers of the multicast group.
