Q：What to do if the enable password is lost on the mid-range router
A： Reboot the router and press **Ctrl+B** to enter the BootROM. Select **Clear applicat ion password** and reboot the router. After reboot, press **Enter** for several times to di rectly enter the privilege mode. Enter the config mode and run the **enable password** command. Then, change the enable password and save the configuration by writing i n privilege mode.

The method of clearing password differs with the router version:

1. Version 97: Incapable of clearing password, upgrade to V2.0.

2. V2.0
 1> Press **Shift+D** while power-on self-test to enter the download interface.
 2> Type * after the password is displayed.
 3> Type **Shift+3**, that is to enter **#**.

3. vrp1.0
 1> Press **Ctrl+B** while power-on self-test to enter the download interface.
 2> Press **Enter** by default after the password is displayed.
 3> Type **Ctrl+P**.
