Q: Which methods can be used to upgrade VRP and BootROM on low-end and mid-range routers?

A: VRP can be upgraded on mid-range routers (26XX/36XX series) through TFTP (router serves as the TFTP Client), FTP (router serves as the FTP Server) or XMODEM.

VRP can be upgraded on low-end routers (16XX/25XX/4001 series) through FTP (router serves as the FTP Server) or XMODEM.

BootROM can be upgraded on low-end and mid-range routers through XMODEM only.

For the detailed upgrade procedure, refer to the upgrade guide.
