

S3610/5510交换机CPU利用率高时收集信息的方法

一、 组网:

无

二、 问题描述:

在S3610/5510交换机使用过程中, 通过“display cpu”命令观察到CPU利用率较高。

三、 过程分析:

导致CPU利用率高的原因大致可分为两种, 分别是上CPU处理的报文过多或MAC地址学习数量多。

四、 解决方法:

具体信息的收集方法详述如下:

[H3C]_ //进入隐含模式

Now you enter a hidden command view for developer's testing, some commands may affect operation by wrong use, please carefully use it with our engineer's direction.

[H3C-hidecmd]_dis drv rxtx interrupt ?

INTEGER<0-1119> rxtx module: Interrupt index.
all all interrupt information

[H3C-hidecmd]_dis drv rxtx interrupt all //查看当前设备中断使用情况

Display all Interrupt information.
Interrupt 578 RX_BUFFER_QUEUE0 total num 29
Interrupt 583 RX_BUFFER_QUEUE5 total num 236
Interrupt 615 TX_BUFFER_QUEUE6 total num 236
Interrupt 631 TX_END_QUEUE6 total num 236
Interrupt Queue 0 total num 265
Interrupt Queue 5 total num 236
Interrupt Queue 7 total num 236

[H3C-hidecmd]_dis drv rxtx statistics //查看当前报文收发统计信息
