

MG6030实现完整功能所需要的端口号是哪些

MG6030的端口:

TCP listening port: agent : 3298; auth: 12174; httpd: 8080

//增加十组默认NAT端口

第一列和倒数二、三列为TCP, 其他为UDP

```
unsigned short wPort[10][8]= { { 1720, 1719, 22520, 22620, 22720, 55500, 55506, 22820},  
{24400, 24200, 22522, 22622, 22722, 55600, 55606, 22822},  
{24402, 24202, 22524, 22624, 22724, 55700, 55706, 22824},  
{24404, 24204, 22526, 22626, 22726, 55800, 55806, 22826},  
{24406, 24206, 22528, 22628, 22728, 55900, 55906, 22828},  
{24408, 24208, 22530, 22630, 22730, 56000, 56006, 22830},  
{24410, 24210, 22532, 22632, 22732, 56100, 56106, 22832},  
{24412, 24212, 22534, 22634, 22734, 56200, 56206, 22834},  
{24414, 24214, 22536, 22636, 22736, 56300, 56306, 22836},  
{24416, 24216, 22538, 22638, 22738, 56400, 56406, 22838} };
```

不确定端口:

- 1、升级本地TCP端口
- 2、自动升级本地TCP端口
