WX5002的IPv6功能的典型配置

适用WX5002版本：Comware Software, Version 5.20, Release

1106P01

一、组网需求

WX5002、WA2110、H3C POE交换机、便携机（安装有11b/g无线网卡）

二、组网图

本例中WA2110的序列为210235A22W0077000088。

SSID的名称为**H3C-IPv6**。

本例中WA2110和WX5002通过二层网络连接，同时由于WX5002暂不支持IPv6地址池，所以客户端、AP、WX5002都配置静态IPv6地址。

三、WA2110的配置

在WA2110上配置静态IPv6地址2001::22/64，并指定AC地址为2001::11，具体配置如下：

```
#  
version 5.20, Release 1106  
#  
sysname H3C  
#  
dns resolve  
#  
ipv6  
#  
wlan ac ipv6 2001::11  
#  
vlan 1  
#  
interface NULL0  
#  
interface Vlan-interface1  
ipv6 address 2001::22/64  
ip address dhcp-alloc client-identifier mac Vlan-interface1  
#  
interface Ethernet1/0/1  
#  
interface WLAN-Radio1/0/1  
#  
undo gratuitous-arp-learning enable  
#  
user-interface con 0  
user-interface vty 0 4  
user privilege level 3  
set authentication password simple H3C  
#  
Return  
四、WX5002的配置  
#
```

```
version 5.20, Release 1106P01
#
sysname H3C
#
domain default enable system
#
ipv6
#
vlan 1
#
domain system
access-limit disable
state active
idle-cut disable
self-service-url disable
#
wlan rrm
dot11a mandatory-rate 6 12 24
dot11a supported-rate 9 18 36 48 54
dot11b mandatory-rate 1 2
dot11b supported-rate 5.5 11
dot11g mandatory-rate 1 2 5.5 11
dot11g supported-rate 6 9 12 18 24 36 48 54
#
wlan service-template 2 clear
ssid H3C-IPv6
bind WLAN-ESS 2
authentication-method open-system
service-template enable
#
interface NULL0
#
interface Vlan-interface1
ipv6 address 2001::11/64
#
interface GigabitEthernet1/0/1
#
interface GigabitEthernet1/0/2
#
interface M-Ethernet1/0/1
#
interface WLAN-ESS2
#
wlan ap ap1 model WA2100
serial-id 210235A22W0077000088
radio 1
service-template 2
radio enable
#
user-interface aux 0
user-interface vty 0 4
#
return
```

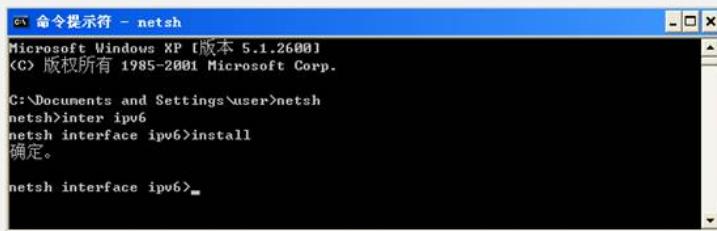

此时在WX5002上可以看到WA2110以IP地址在AC上注册成功，如下所示：

```
[H3C]display wlan ap all
Total Number of APs configured : 1
Total Number of configured APs connected : 1
Total Number of auto APs connected : 0
AP Profiles
AP Name      APID State    Model      Serial-ID
ap1          1   Run       WA2100     210235A22W0077000088

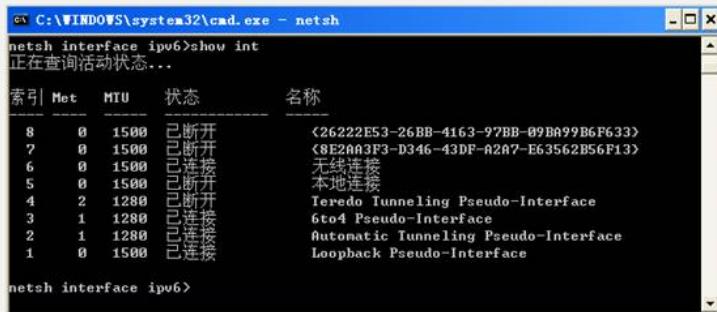

[H3C]display wlan ap all verbose
Total Number of APs configured : 1
Total Number of configured APs connected : 1
Total Number of auto APs connected : 0
AP Profile: ap1
APID : 1
AP System Name : Not Configured
State : Run
Up Time(hh:mm:ss) : 00:01:15
Model : WA2100
Serial-ID : 210235A22W0077000088
IP Address : 2001::22
H/W Version : Ver.C
S/W Version : V100R001B43D004
```

五、客户端的配置

1、安装IPv6

2、查询各接口索引，可看到在本例中“无线连接”的索引为6

3、配置客户端静态IPv6地址为2001::1，并查询配置确定配置成功。

4、选择连接SSID“H3C-IPv6”，此时客户端可ping通AC和AP的IPv6地址2001::11和2001::22。

```
ps C:\WINDOWS\system32\cmd.exe
C:\Documents and Settings\user>ping 2001::11
Pinging 2001::11 with 32 bytes of data:
Reply from 2001::11: time=5ms
Reply from 2001::11: time=2ms
Reply from 2001::11: time=2ms
Reply from 2001::11: time=2ms

Ping statistics for 2001::11:
    Packets: Sent = 4, Received = 4, Lost = 0 <0% loss>,
    Approximate round trip times in milli-seconds:
        Minimum = 2ms, Maximum = 5ms, Average = 2ms

C:\Documents and Settings\user>ping 2001::22
Pinging 2001::22 with 32 bytes of data:
Reply from 2001::22: time=9ms
Reply from 2001::22: time=4ms
Reply from 2001::22: time=4ms
Reply from 2001::22: time=4ms

Ping statistics for 2001::22:
    Packets: Sent = 4, Received = 4, Lost = 0 <0% loss>,
    Approximate round trip times in milli-seconds:
        Minimum = 4ms, Maximum = 9ms, Average = 5ms

C:\Documents and Settings\user>
```

补充说明：

此时Windows无线客户端提示无法获取地址，此时正常现象，因为Windows客户端目前的提示信息是基于IPv4的。
