

知 MSR Connect With Cisco Router By MPLS VPN

张瑞 2008-10-15 发表

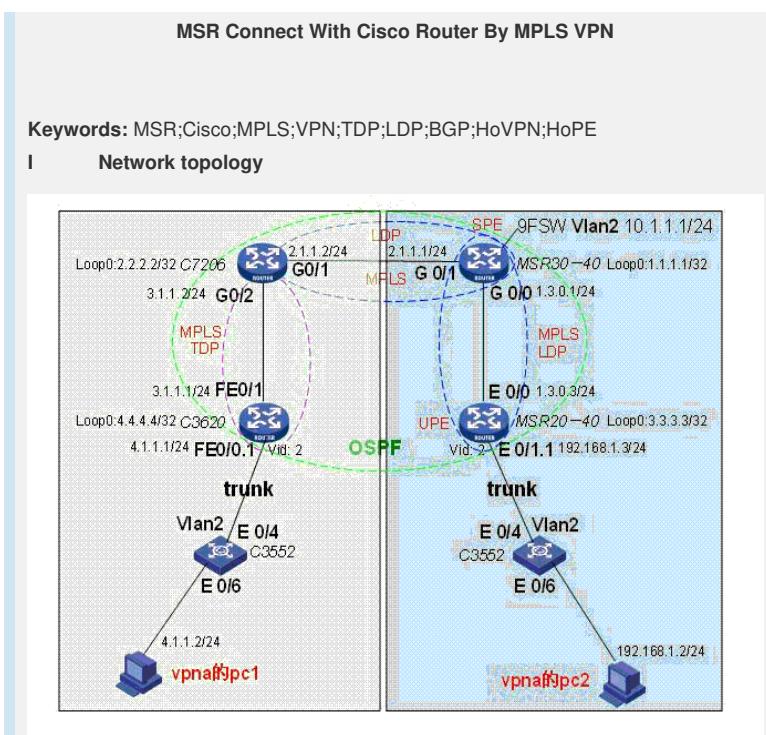

Figure 1 MSR Connect With Cisco by MPLS VPN and Multi-lable

II Description of the problem

MSR connect with Cisco Router through three layer VPN. All the router run OSPF, TDP was used on Cisco device, LDP was used on MSR device. Cisco7206 work as reflector, connect MSR30-40 with LDP, connect C3620 with TDP. The lable was transferred on C7206. MSR30-40 is SPE, MSR20-40 is UPE, MSR30-40 use 9DSIC FSW, and binding VPN instance on virtual interface, access PC. MSR20-40 using sub-interface connect switch by trunk and binding VPN instance. Cisco 3620 using sub-interface connect switch by trunk, access PC.

Device List: 2 MSR; 1 Cisco router; 2 Cisco 3500 Switch; 2 PC

CMW Version: MSR Version 5.20, Beta 1106;

Cisco IOS Software Version 12.4

III Process analysis:

1) Connect every device as Figure 1, and config ip address. Running OSPF to provide the connection of each device;

2) Config MPLS VPN, and binding VPN instance under defined interface;

The whole configuration show below:

```
MSR30-40
sysname MSR30-40
#
router id 1.1.1.1
#
//config VPN instance, RT is 1:1
ip vpn-instance vpna

```

IV Result Analysis

After configuration, PC2 can reach PC1, but could not reach either of the middle loopback address of router.

The crux in configuration is Using TDP global on C7206 and Using LDP under the interface which connect MSR30-40.

From this test, we make sure that MSR can communicate with Cisco Router under different MPLS VPN labels. Also, MSR can binding VPN instance under sub-interface of ethernet, virtual interface of vlan.
