The Routing and Lable In MPLS VPN In MSR Series

Keywords: MSR;Routing;Lable

Q: The third across AS of BGP MPLS VPN, why ASBR not passing routing and lable info to PE?

A:

The possible reason is blow:

- 1) The BGP state of ASBR isn't Established;
- 2) ASBR are not directly connected;
- 3) The connected link of ASBR not enable MPLS, Result in lable routing not be choiced by ASBR;
- 4) ASBR not import the loopback address routing of local AS;
- 5) The policy of export routing on ASBR config error, result in routing abandon;
- 6) Maybe there configed ebgp-max-hop between ASBR;
