How to Check the Number of Users When Calling with VE1 interface In MSR Series

Keywords: MSR; Number of Users; VE1

Q: If i want to know the total number of users who are calling at the same time, under VE1 module , and the module working on PRI. What should i do?

A:

Under system view using command: display isdn call-info, you can get all calling interface state. If you want to check one of them, using command: display isdn call-info interface ***interface-name*** .

Among the table, " _ " ----- means call finished, otherwise means this interface is calling. The device not provide us the exact number of calling now.
