The Feature of CE1/PRI In MSR Series

Keywords:MSR;CE1/PRI

Q: What is the feature CE1/PRI in MSR Series ?

A:

CE1/PRI has 2 work mode: E1(none-channel) and CE1/PRI(channel).

CE1/PRI(channel) can be devided to CE1 interface and PRI interface, CE1 interface is separate the 2M E1 to 32 64K channels, every channel can be used as a serial interface, the same as sychonized serial, and can be bundled.

PRI mode is using 16 timeslot as D channel, the same as ISDN PRI logically. One CE1/PRI interface can bundle only one PRI-SET, which include 30 timeslot. The configuration only related with 16st timeslot, because the communication that chansfer through which timeslot is radom.
