

The POE Card In MSR Series

Keywords:MSR;POE

Q: How to use POE card In MSR Series ?

A:

The POE module working in POE mode, only if there is a POE power and POE card or DIMM chip to support this function. Now, MSR50 has external POE, MSR30 need to change the normal power to POE, MSR20 not support POE. On the router, we can see a POE pilot lamp, if this lamp flash, that means this router can work in POE mode. Also, in material, if there has a P behind the module name, that means this module support POE.
