Standard memory configurations for the SR6600 series routers

管祥杰　2009-01-13 发表

What are the standard memory configurations and memory limitations for the SR6600 series routers?

l　　　　The standard memory configuration for SR6602 routers is 1 GB (2 × 512 MB).

l　　　　The standard memory configurations for the RPUs, FIP-100, and FIP-200 of SR6604/SR6608 routers are 1 GB, 1 GB,, and 1 GB (2 × 512 MB) respectively. The memory for the FIP-200 of the SR6602 and SR6604/SR6608 routers can be expanded up to 2 × 1 GB, not supporting the simultaneous use of 1 GB and 512 MB memory modules.
