

## Power supplies for the SR6600 series routers

管祥杰 2009-01-13 发表

### **What are the power supplies for the SR6600 series routers?**

An SR6602 router adopts a single power supply. It cannot be DC-powered but can provide a redundant power system (RPS), which needs to be purchased separately. An SR6604/SR6608 router is equipped with two redundant power modules. It can be AC-powered or DC-powered.
