MSR VE1 supports 30 call channels

Q：AR E1V1 has the conception of directional 30 channels and bidirectional 15 channels, does MSR VE1 have the conception also?

A：
For users there are no difference between AR E1V1 and MSR VE1. There are only little functional difference. One directional 30 channels and bidirectional 15 channels are the Ethernet flow conception. The accurate description should not have the division. Support 30 channel is suitable description.
