Does it support 2 GK registrations at the same time?

Q: Does it support 2GK registrations at the same time when configuring GK master device?

A:

According to H.323 protocol, one GW can only register to one GK simultaneously. When router configures GK master device, it will launch registration request to master GK. And if cannot register successfully during one period, then it will launch the registration request to backup GK. The router will refresh the registration at regular intervals.
